I think I recognize the set. It is the same as a National made in late 1930s or 1940s. It is one of the AC-DC sets National made. I will look up the model number, but it might be the NC-44 or NC-80. It should have round IF cans, not the square ones National usually used. RCA or Radiomarine purchased it from National and supplied it to the US Navy. RCA might also have contracted with National to have it specially built. I don't know. A friend on mine bought one at a local hamfest.

My wife is on the "fleamarket trail" again, and continues to bring goodies into the hamshack! Consequently I am running out of room and have the following items for sale. Prices INCLUDE SHIPPING in continental 48 states.

1. Original manual for Dentron MLA-2500 Amplifier - \$10
2. Original manual for Icom IC-PS15 AC Power Supply - \$6
3. Vibroplex Original bug. Serial #190891, c. 1956. Gray base. Has circuit closer. Very nice condition, 833 Broadway address. \$85
4. Vibroplex Original Deluxe bug. Serial #226754, c. 1962. Chrome base, red finger pieces. Has circuit closer, with decorative plastic "jewel" on top. Very nice condition, 833 Broadway address. \$115.

Again, prices INCLUDE SHIPPING TO CONUS.

Congratulations! IMHO the SP200 is one of the most robust radios ever--they seem to work even when most of the components are out of spec. Do the caps, however, it does make a difference. It is also the best-sounding single-conversion set (puts on asbestos suit), what with the continuously-variable bandwidth and the push-pull 6F6 output stage.

Oh, yeah, probably the heaviest single-conversion set as well....

Cc: johnmb@mindspring.com

John,

I have a BC-779A and R-129 in two different shades of gray. In restoring them, I tried to match the original colors. Shield cover for both is black wrinkle (to keep your fingers off those B+ hot IF adjustment screws?).

The black panel such as you describe is apparently a common color for these as well. I have also seen a variant with no color at all, just some MFP coating. To my knowledge, it was original.

>From my webpage:

"Pictures of WW II aviation ground stations such as those of the Army Airways Communications System typically show 7 or more rack-mounted SP-200 series receivers such as the BC-779 in one or more shades of gray and in black. Matching speakers are mounted as a pair side-by-side in a rack space equivalent in size to the receiver. See the March 1944 issue of QST magazine for information and pictures of AACS installations. These radios were also shipped in quantity to other Allied nations, as noted in period Hammarlund ads."

Sounds like you really won out in the silent auction!

I have what looks to be a T-368 exciter. Is marked B&K 15000 oscillator-multiplier assembly. Has Collins 70H9 PTO covers 1.5 to 20 Mhz in 4 bands. Has 4 ceramic 7-pin sockets, 3 marked 6AH6 and octal marked 6000 ( yup, -368... ) \*\*SLUG RACK IS MISSING\*\*. Barn worn, but should clean up and be usable.

No offer, reasonable or otherwise, refused. First come-first served, void where prohibited.

I have to replace the IF xfmrs in a radio (some idiot sealed the slugs with Loctite). I have several Miller IF xfmrs but do not know which position they were designed for. They are marked with a 119- code but not the codes given in the spec sheet. Does anyone have the breakdown of the 119 code? Thanks.

Unlikely as it may seem, I would do my level best to salvage those IF cans.  
So many of the K-trans have been shit-canned that my thinking is there  
isn't much of a stock of replacements out there that you can have much luck  
finding any of the much rarer narrower bandwidth models for communications  
receivers. I'm just guessing about this, I would like to be proven wrong.  
Let us know how you make out.

Have been gone for quite a while ( work ) so really not in a place for BA  
participation. Questions have come up in dealing with a saved from dumpster  
radio, CE-10B. From what I've come up with this was a proto-SSB exciter  
back in the Mesozoic of that mode. Silly thing needed band coils and this  
booger has none. Also from stuff I've read it is supposed to be a  
competent though limited piece of equipment. Any coil info / CE-10B  
experience out there?? Thanks.

Yes, Arrow lost many of their top executives in a hotel fire. This was almost 20 years ago. However, they are the second largest distributor in the United States (Avnet is the largest) and are doing quite well. While they cater primarily to companies, they have a telemarketing organization and will do business with individuals. Just check out arrow.com.

Hi: I went to McClellan yesterday to preview the junque. Some of the descriptions on the web are a little off.

Lot 192: Cardmatic tester. There is one tester and one case of cards, not two cases of cards as listed in the catalog. Looked in good condition.

Lot 326: TV7D/U tube testers. I looked at two and those seem to be in good shape.

Lot 388: Two power supplies by Hallicrafters for the GRC-26A. One still in crate. Contract date '51. RTTY use? Beware freight.

Gang-

Here are the real basics of how to keep me happy, the list noise-free, and everyone able to enjoy BoatAnchors... Simple, easy, workable...

Do not send spam e-mail messages to the list.

Do not send attachments (attached files) of \*ANY\* sort to the list.

This includes URL shortcuts, v-cards, GEDCOM files, zipped files, and  
\*ANY\* other type of attachment.

Do not EVER forward virus warnings (which are 99%hoaxes) or send chain  
letters to the list.

Do not use HTML or RTF (rich text format) in messages sent to the  
list.

DO keep e-mail messages to the list on topic and appropriate.

Do not post commercial messages.

Please refrain from posting "Ebay" type auction notices. Refrain from  
"seen on EBAY" posts...

DO be polite.

Do not flame other members of the list.

DO be considerate of the list members and list resources.

DO have fun!

Subject: NC-44 aka AR8505 / tks BA community & rec.antiques.....

Got Rider's 14 this AM & there was the AR8505 aka NC-44... sans pilot lights. National had 'em, RCA version didn't. & RCA had big 3/8" cart. fuses instead of 3AGs.

Can't help but wonder if the AC-DC 300ma-string cheapie was a give-away by RCA to promote shippers' use of the RCA-Marconi services.

Like Microsoft giving a E-power computer if you sign up for 6 yr.s of 14.4kb internet service.

What's y'all's guess?

Marty

Earlier this year I lost a hard disk (or rather its contents). It should have been backed up but... well, you know... On it was the URL of an excellent website of US broadcast station call letters and their explanation (e.g. WLS world's largest store, WNUA new-age jazz). I even contributed a few additions to that page.

But I cannot find it using the normal search engines and I just wondered whether anyone has it indexed. If so, I'd really appreciate a quick e-mail. Thanks for the bandwidth and 73,  
Andy G8PTH.

Subject: HW101 rcvr recovery help needed.

A friend of mine picked up a good looking hw101 which requires a little help. It takes what seems to be a very long time for the receiver to recover when switching from transmit to receive (> 5 seconds). He applied the mod decribed in HW-100-20 which moves wires from RL2 and puts them on RL1 to change PA screen switching. This change helps, but does not remove the problem. Is there some thing else that we should be looking for ???

Tnx + 73

Groups,

I finally finished scanning SHIPS 275, Catalog of Naval Radio Equipment, and ran the first reprint. Looks pretty good if I do say so myself. :-)

Cost of a reprint is \$30.00. Shipping in the US is \$5.00. Anyone interested can contact me direct.

For those who don't know, SHIPS 275 is the Navy equivalent to the Army's = TM

11-487, or TM 11-227. Actually closer to the latter, as it only covers radio equipment. No test equipment, wire equipment, etc.

Many thanks to those who e-mailed me direct.

I've now found the list (at

<http://www.olderadio.com/archives/nelson/origins.call-list.html>)  
and it's amazingly comprehensive, as you'll see if you look! It has some  
overseas calls as well.

73,  
Andy G8PTH.

Subject: McClellan - TV7D bidding  
Message-ID: <Springmail.105.964564372.0.016093000@www.springmail.com>

Went back today and looked at the TV7 tube testers. One is complete  
trash, put away with the case full of salt water. One has a dented  
lid, but it should be repairable. The other four look good, one  
being as close to new/unused as I've ever seen.

The current bid is \$652 for the lot. Isn't that a bit much for 4.5  
tube testers????? Oh well, go for broke. You only go around once.  
Richard
